Question-1:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud.

CODE:

```
#include <WiFi.h>
#include <PubSubClient.h>
#define ECHO_PIN 2
#define TRIG_PIN 4
#define LED 5

//IBM credential

#define ORG "r5gra1"
#define DEVICE_TYPE "Dora"
#define DEVICE_ID "30"
#define TOKEN "12345678"

//Customise the above values

OUTPUT:

The screenshot displays the IBM Watson IoT Platform dashboard for a device named 'r5gra1'. The dashboard is divided into several sections: Identity, Device Information, Recent Events, State, and Logs. The 'Recent Events' section is currently selected, showing a table of live data streams. The table has four columns: Event, Value, Format, and Last Received. The events are from an 'IoTSensor' and represent distance measurements in centimeters, each followed by a command 'Alert!'. The values are 3, 93, 75, 195, and 92. The format for all events is 'json', and they were all received 'a few seconds ago'. On the right side of the dashboard, there is a user profile for 'r5gra1' with the ID 'r5gra1' and the account type 'Bluemix Free'. Below the profile, there are links for 'Service Status', 'Terms', 'Privacy', 'Support', and 'Blog', along with a 'Sign Out' button. The top of the browser window shows several open tabs, including 'Drafts (2) - vishn...', 'sketch.ino - Wok...', 'IBM Cloud', 'IBM Watson IoT...', 'Node-RED', and 'Node-RED Dash...'. The bottom of the screen shows the Windows taskbar with various application icons and the system clock indicating 11:43 PM on 29-Oct-22.

Event	Value	Format	Last Received
IoTSensor	{"dist":3,"cmd":"Alert!"}	json	a few seconds ago
IoTSensor	{"dist":93,"cmd":"Alert!"}	json	a few seconds ago
IoTSensor	{"dist":75,"cmd":"Alert!"}	json	a few seconds ago
IoTSensor	{"dist":195}	json	a few seconds ago
IoTSensor	{"dist":92,"cmd":"Alert!"}	json	a few seconds ago
